## "DOLPHIN DIARIES" – A BOOK REVIEW

by Thomas Andrews

"Dolphin diaries" is fascinating new book by Rachel Miller. Miller, a biologist, spent 15 years in Australia where she studied the life and behavior of more than 250 dolphins. Miller's book is very interesting with new facts and discoveries about dolphins.

In the first three chapters, Miller gives details about how dolphins live and work together in communities called "pods". She explains how dolphins hunt together, look after their young and even care for each other when they are sick. I especially enjoyed the parts in chapter three where Miller describes mother dolphins. The mothers spend hours playing with their babies and take care of them until they become adults. The descriptions are vivid and they made me feel like I was standing on the beach watching the dolphins.

Chapter four describes the way dolphins communicate with each other. Miller was one of the first scientists who tried to understand the dolphins' "language". According to Miller, dolphins really talk to each other! She recorded how dolphins greet each other and warn each other against danger. However, this chapter is too long and rather boring.

Miller's book has become very popular. As a result, the quiet beach where she did her research has become a tourist attraction. Unfortunately, the tourists leave their garbage on the beach. This pollutes the water and endangers the dolphins' lives. Miller has asked the local police to stop tourists from throwing garbage on the beach in order to protect the dolphins.

The book "Dolphin Diaries" is a very special book. It combines scientific information and personal experience. Anyone who is interested in dolphins will enjoy reading Miller's book.
